

SelectaDNA Warning Signs and Posters

Personalised or standard reflective outdoor signs warn criminals of the presence of SelectaDNA and can be attached to gates, fencing, exterior walls and lamp-posts. Posters can then be displayed inside to prevent internal theft of equipment. It is proven that the combination of SelectaDNA and high visibility warning messages reduces crime levels by increasing the perceived risk for burglars and thieves.

UV Detection Lights

Selectamark offers a superb range of UV lights that are ideal for detecting SelectaDNA products, ranging from small keyring lights to fixed wall-mounted lamps for custody suites.

Many of these lamps are the same purchased by major banks, airports and ports in the UK for forgery detection of currency and documents, as well as many of the UK's police forces, including the Metropolitan Police.

About Selectamark Security Systems

Selectamark is a UK leader in developing and supplying crime reduction solutions. Since 1985, Selectamark products have secured over 25million items throughout the World.

Leading insurance companies actively recommend Selectamark to their policy holders, and Selectamark Visible Property Marking and SelectaDNA are Police Approved and hold Secured by Design Status.

Selectamark is committed to offering superb value for money, the most secure and robust products on the market and excellent customer service.

SelectaDNA is the most advanced forensic crime reduction system in the world - a system which irrefutably links criminals to crime scenes and provides an unbreakable chain of evidence in a court of law.

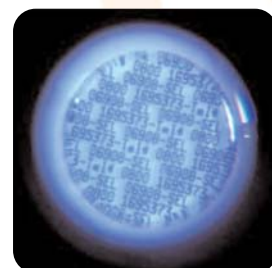

SelectaDNA is proven to reduce burglary by upto 85%, is Police Approved and holds Secured by Design Status.

Each batch of SelectaDNA contains a non-toxic liquid containing a unique DNA code. The solution can only be seen under UV light.

By displaying warning labels, window stickers and other signage, it immediately deters burglars and thieves as they know DNA links them to the crimes they commit. Further deterrence is brought about by the Police routinely scanning stolen property and criminals for traces of SelectaDNA.

Once detected, a sample of SelectaDNA can be taken and forensically analysed to prove beyond all doubt which crime scene the item or offender has come from.

The SelectaDNA product range has been developed to tackle all forms of crime. Details of our key products are provided below.

SelectaDNA DNA Forensic Property Marking Kits

SelectaDNA property marking kits protect domestic and commercial property from theft and burglary.

Property can be secured within seconds by simply brushing the solution onto valuable goods. Once applied SelectaDNA dries hard and is virtually impossible to remove.

The tamper resistant warning stickers supplied with each kit can then be applied, instantly making all marked property too-hot-to-handle for would be thieves and burglars.

The code from each batch of SelectaDNA is then recorded on Selectamark's secure LPCB approved database - creating an instant link between any recovered items and their owners. As well as the DNA identifier, the solution contains 1,000s of tiny microdots, each containing the database phone number and unique owner's code. This gives the Police the ability to positively ID a recovered item on-the-spot.

SelectaDNA kits can be purchased to mark 50, 100, 500 and 1000 items, such as:

- ❖ Computers and IT equipment
- ❖ Other electrical equipment such as DVDs & TVs, mobile phones, MP3 players and games consoles
- ❖ Valuable antiques and paintings
- ❖ Industrial machinery, tools and equipment
- ❖ Leisure equipment such as golf clubs and horse tack
- ❖ Motor vehicles, motorcycles, bicycles, and quad bikes
